College

2018 - 2020

GCSE: Computer Science, IT,
Maths, Physics, Geography,
Spanish, Fine Art

Allerton High School

2013 - 2018

About

I'm Raf, Currently in my personal time I'm studying Chinese, I have achieved HSK2 in just under 6 months and I'm hoping to take the HSK3 exam this year. I'm passionate about connecting with art and people through that art. I love to read and learn recipes and cooking techniques from narrative cookbooks I hope to write my own someday, away from the kitchen I like to explore music and movies and support my favourite artists and directors. When I'm away from home I'm often found practicing Muay Thai at my local gym

Work Experience

Software Engineer: RAM Tracking

Worked on reaching feature parity between a legacy monolithic system and a new microservices system. Both of which process, interpret and store vehicle tracking unit messages and also provide a user interface for customers to view, track and manage their assets. I also wrote internal use parsing and encoding tools to aid development. Legacy system was written in Java, Javascript, MySQL, AWS. New services were written in Java, Groovy, Kotlin, database remained MySQL and AWS, web frontend was React, app was React Native. Responsible for development, testing, documenting, releases, demoing. I was also entrusted with architecting and implementing a new data model as we began to consume an old camera unit project into a new microservice
February 2025 - Present

Placement Software Engineer: Cognitran Limited

Worked on two fullstack projects during the year, the first was a bespoke legacy system written in Java, Javascript, Java Server Pages, MySQL, Oracle DB. The second was a new NextJS project with a frontend and backend written in Typescript with a MySQL database. Responsible for development, testing, estimations, database migrations. I was also entrusted with releases and demoing to clients by the project manager
August 2023 - August 2024

Pizza Chef: Ecco Pizzeria

Worked in a fast paced environment as both back of house and front of house chef at my local restaurant, learnt how to manage stock and balance timing and work under pressure. Responsible for food preparation, furnace managing, stock taking and station cleaning
August 2022 - February 2023
