About

"Raf" Shahid is a versatile software engineer with a strong technical foundation and hands-on experience in languages like Rust, Java, and Python. Currently pursuing a BEng in Software Engineering, he has delivered impactful projects and gained diverse work experience, blending technical expertise with a passion for innovation and growth.

Notable Projects

SHU Software Architecture & Design

Learnt how to architect software systems, created a grand design document as well as various artifacts to document the new system
November 2024

FRMWRK

Ongoing system configuration for my immutable and reproducible laptop work and entertainment system which takes a modular approach leveraging gitsubmodules allowing shared modules across an array of systems
September 2024

Barish

BBC weather scraper which allows the user to provide a location as an argument and then pulls the correct weather information using a table of arbitrary location codes used by BBC weather's official rss feed
Agusut 2023

Socks

multi-threaded client-server socket based chat application with channels which stores chats as json objects allowing a dead server to deserialise and restore itself upon start using a log file
january 2023

Work Experience

Placement Software Engineer: Cognitran Limited

Worked on full stack software systems for Jaguar Land Rover as well as internal software solutions provided by Cognitran for companies such as JCB & Harley Davidson
August 2023 - August 2024

Pizza Chef: Ecco Pizzeria

Worked in a fast paced environment as both back of house & front of house chef at my local restaurant, learnt how to manage stock and balance timing and work under pressure
August 2022 - February 2023
